The SHIELD Advantage

Linking the Same Device Across Different Apps

Traditional device identifiers like UUIDs are inconsistent and easily changed.

SHIELD is the **only solution** that persistently and accurately identifies devices **across apps**—even after reinstalls, factory resets, or OS-level changes. This persistent device ID powers the world's most advanced global fraud intelligence network.

Global Scale & Unbeatable Coverage Global Intelligence Network

SHIELD's Global Intelligence Network (GIN) is a continuously evolving repository of every fraud pattern, malicious tool, and attack technique ever encountered, updated in real time across all continents.

Our coverage spans mobility, fintech, e-commerce, and more across every major region, giving us the most diverse threat intelligence in the industry.

When a fraud pattern appears in one market, we instantly detect and neutralize it everywhere, across all verticals and geographies.

SHIELD Sentinel

Real-Time Session Monitoring Patented Technology

Protected by patent, SHIELD Sentinel is the world's only technology to provide always-on device session monitoring. It tracks the full device session in real time to pinpoint the exact moment a user activates a malicious tool.

While others take periodic snapshots, SHIELD Sentinel delivers continuous visibility and zero blind spots.

No PII, No Problem

Skip compliance headaches. We runs with existing user permissions, are GDPR compliant & SOC 2, PCI DSS accredited.

Plug & Play SDKs or JS

Integrate with minimal engineering effort. Get up and running in minutes with a simple setup and developer-friendly docs.

See Results Instantly

No training period. No delays. See real ROI from the moment you go live. We flex with you at every stage of growth.
